Email: bsrikanth3934@gmail.com

GitHub: github.com/BYAGARI-SRIKANTH

LinkedIn: [Linkedin.com/byagarisrikanth](https://www.linkedin.com/byagarisrikanth)

Computer Science graduate with strong foundations in Python and Machine Learning. Experienced in building data-driven projects using libraries such as NumPy, Pandas, and Scikit-learn. Interested in applying machine learning techniques to solve real-world problems and eager to contribute as an AI & Data Intern.

EDUCATION

Vidya Jyothi Institute of Technology, Moinabad Computer Science Engineering: GPA: 6.50/10.0	Telangana, India June 2021 - May2025
Global Junior College,Pargi Intermediate Course : GPA: 548/1000	Telangana, India August 2019 - May 2021
Zilla Parishad High School,Pargi Secondary School Certificate : GPA: 7.0/10.0	Telangana, India June 2018 - May2019

SKILLS

- **Programming :** C, Python
- **Libraries :** NumPy, Pandas, Matplotlib, Seaborn, Scikit-learn
- **Machine Learning :** Supervised Learning (Linear Regression, Logistic Regression, Decision Trees, KNN)
- **Data Preprocessing :** Handling missing values, Encoding, Scaling, Train-Test Split
- **Model Evaluation :** Accuracy, Confusion Matrix, Precision, Recall
- **Tools :** Jupyter Notebook, Google Colab, Git, VS Code
- **Database :** MySQL (Basic)

PROJECTS

Credit Card Fraud Detection (Classification) LINK	April 2025 - April 2025
• Situation : Fraud detection problem with highly imbalanced credit card transaction data. • Task : Build a classification model prioritizing fraud detection over overall accuracy. • Action : Applied scaling and class imbalance handling, implemented Logistic Regression, and evaluated using Precision, Recall, F1-score, and Confusion Matrix. • Result: Increased Recall to improve detection of fraudulent transactions while maintaining balanced performance.	
House Price Prediction using XGBoost (Regression) LINK	May 2025 - May 2025
• Situation: Housing prices depend on multiple features with potential missing data affecting model accuracy. • Task: Build a regression model to accurately predict house prices and improve over basic models. • Action: Performed feature analysis, handled missing values, implemented XGBoost Regressor, compared with baseline regression models, and analyzed feature importance. • Result: Achieved improved prediction accuracy over basic models and identified key factors influencing house prices.	
Medical Insurance Cost Prediction (Regression) LINK	Nov 2025 - Nov 2025
• Situation: Insurance charges vary based on demographic and lifestyle factors. • Task: Develop a regression model to predict medical insurance costs effectively. • Action: Encoded categorical variables, applied feature scaling and train-test split, and evaluated using R², MAE, and MSE. • Result: Built a reliable prediction model and identified smoking status as a major cost-driving factor.
